

EMULSIFIABLE VEGETATION KILLER

Bare Ground Weed Control

Form: Liquid

Color: Clear, Red

Odor: Petroleum-like

pH: No data available

Solubility (in water): Emulsifies
(in mineral spirits): No data available

VOC Content (% by wt): >90

Flash Point (ASTM D-7821): 123°F

Specific Gravity: 0.87 g/cm³

Density: 7.26 lbs/gal

Storage Stability (at 70°F): 1 year

<u>Ingredients</u>	<u>C.A.S. #</u>
Prometon	1610-18-0
Inert Ingredients	Proprietary

Excellent for use around...

- **Buildings**
- **Industrial Sites**
- **Parking Lots**
- **Railroad Sidings**
- **Fence Rows**
- **Storage Yards**

Note: Surfactant should be used when applying this product.

DIRECTIONS: Mix 1 gallon of EMULSIFIABLE VEGETATION KILLER with 10 gallons of water and apply uniformly over 1000 square feet of soil surface. Thoroughly wet all foliage to ensure contact action. Best results are obtained when the applications are made during or after weed emergence while growth is succulent. Where vegetation is tall and dense, use 1½ gallons of this product with 10 gallons of water per 1000 square feet.

For control of hard-to-kill perennial weeds and grasses such as Johnson grass, bindweed and wild carrot, use 3 to 4½ gallons in 10 gallons of water per 1000 square feet. Although this product has considerable activity through foliar contact, much of its activity is through the roots; therefore, adequate rainfall is necessary to move the herbicide into the root zone.

CONSULT PRODUCT LABEL FOR COMPLETE DIRECTIONS.
